

Uploading Your Lesson off Campus to Nethome (formerly Homedirs)

Security settings are different when you uploading a file from your home computer. You must use secure file transfer software to upload your SoftChalk lesson when you are off campus. If you are on a PC (Windows-based) computer, use Filezilla. If you are on a Macintosh computer, use FUGU or Cyberduck.

You can download these free software programs from MCC's Technology Support Services website at <http://wiki.mc.maricopa.edu/tsswiki/index.php/Portal:Software> This site also provides detailed directions on how to download the software, install it, configure it, and use the software to connect to the nethome server.
